About

How do I use the HOMEMATIC app?

The app displays the current state of your appliances in the Home screen. For example, if the TV is running, that will be reflected in the overview. Notice these little rays?

You can tap on any highlighted area. HOMEMATIC will take you to the controls for that item. You can get help by tapping the question mark button in the top right corner, but the controls should generally be self explanatory.

How does HOMEMATIC work?

All of our products integrate with our advanced indoor positioning system, which allows us to automatically create a blueprint of your home's topology and place our appliances in it. You can then control all of them with our amazingly simple overview screen.

What if I have more than one home?

Whoa there, high roller. Of course we thought of you. Register your other homes. Then, all you have to do to control your huge mansion in Ibiza is swipe left or right! (That's probably the fastest way to travel that was ever invented!)

What if I have more than one floor?

HOMEMATIC takes care of that. In the main overview, swipe up or down to select different floors. Or use the controls at the bottom.

Who built HOMEMATIC?

David Pape 01634454
